

POSTMAN

Pasos para hacer llamadas APIS en Postman

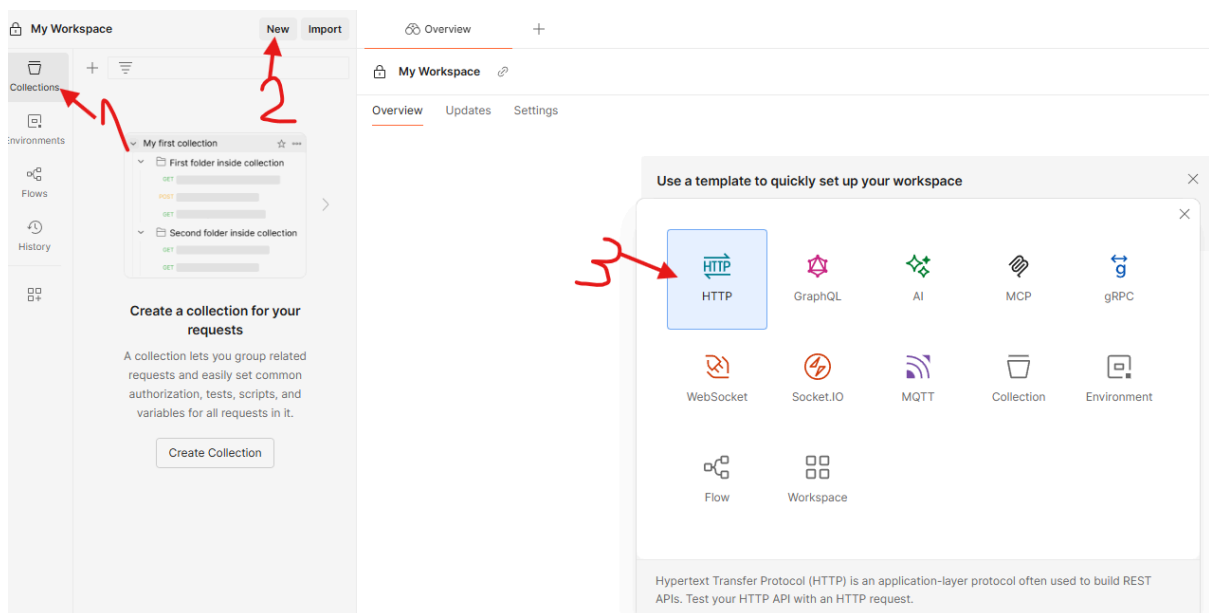

1. Metete desde tu navegador a la web oficial de Postman o descarga la aplicación (tu decides).

2. Haz click en workspace y a continuación a my workspace.

3. Una vez dentro hazle click a Collections, seguido de new y escoge la opcion de HTTP.

- Una vez creada la Collection pon la API que desee usar (en este caso <https://restcountries.com/v3.1/all>) y denle a SEND. Obtendrás un listado de objetos JSON con información de todos los países: nombre, población, capital, bandera, idiomas, etc.

The screenshot shows the Postman interface with a GET request to `https://restcountries.com/v3.1/all`. The response is a JSON array containing data for Botswana. The status is 200 OK.

```
1 [
2   {
3     "name": {
4       "common": "Botswana",
5       "official": "Republic of Botswana",
6       "nativeName": {
7         "eng": {
8           "official": "Republic of Botswana",
9           "common": "Botswana"
10        },
11        "tsn": {
12          "official": "Lefatshe la Botswana",
13          "common": "Botswana"
14        }
15      }
16    },
17    "tld": [
18      ".bw"
19    ],
20    "cca2": "BW",
21    "ccn3": "072",
22  },
23  ...
24 ]
```

No olvidar ponerlo en GET o no saldrá.

EJEMPLOS: Buscar país por nombre

The screenshot shows the Postman interface with a GET request to `https://restcountries.com/v3.1/name/españa`. The response is a JSON object containing data for Spain. The status is 200 OK.

```
1 {
2   "name": {
3     "common": "Spain",
4     "official": "Kingdom of Spain",
5     "nativeName": {
6       "spa": {
7         "official": "Reino de España",
8         "common": "España"
9       }
10    },
11    "tld": [
12      ".es"
13    ],
14    "cca2": "ES",
15    "ccn3": "724",
16    "cioc": "ESP",
17    "independent": true,
18    "status": "officially-assigned",
19    "unMember": true,
20  },
21  ...
22 }
```

Filtrar por región
